Export File Specifications

The image is a composite graphic with a dark blue background. At the top left is the Canada Post logo, which includes the text 'CANADA POSTES' and 'PO ST CANADA' around a red circular emblem with a white maple leaf. Below the logo, on the left side, are three white text links: 'Electronic Shipping Tools', 'User Guide', and 'Desktop Version'. On the right side, there is a grayscale image of a computer keyboard with a prominent red key labeled 'Help'. At the bottom of the graphic, the text 'Export File Specifications' is centered in white.

1.0 Introduction

Purpose

The Purpose of this document is to list the various export file specification available to use with the Desktop version of the Electronic Shipping Tools application.

Description of Export File Specification

The Order History Export allows the EST desktop user to enter a date range and specify what type of file format to export (original or extended). Data will be exported from Electronic Shipping Tools based on orders that have a creation date greater than or equal to the start Date, and less than or equal to the end date. If no Order of a given category (i.e. Manifest or SOM) matches the selection criteria, none of the files in that category are created.

2.0 Export file specifications

2.1 Order History Export with the Desktop version

The following export files are produced by the desktop version of the Electronic Shipping Tool. The application will produce up to 11 text files depending on the services used and the criterion's selected. The Order History export files are comma-delimited files where fields are all enclosed in double quotes (“”). The system will store a blank entry (i.e. “”) where no information is available. All fields are text formatted. For the SOM export files, there are two file formats (Original or Extended). The Extended File column in the SOM Export File Layouts below identifies the new fields exported if the Extended radio button is selected on the Order History Export window.
